

StarCode POS

Complete Inventory Management Solution

MULTI PLATFORM

Point of Sale and Inventory Management System for Windows, iOS, and Android Platforms. StarCode is capable of running on PC's, Laptops, and Tablets seamlessly.

BARCODE GENERATION

Generate over 50 different types of barcodes, including the QR codes with one click.

PRINTING

Print seamlessly to desktop or small receipt printers. All the reports and receipts can be printed in PDF format as well.

EASE OF USE

All the solutions have been designed keeping in view the comfort of end user. No complicated installation and configuration. Easy one click install and ready to use after installation.

THREE VARIANTS

StarCode is available in three variants in order to address the requirements of every customer. Whether you are a small shop, big retail outlet, or a home user, we have a POS and inventory management solution tailor made for you.

StarCode Pro

StarCode Plus

StarCode Lite

Available for Windows and Android Tablets

No matter if the business you own is small or large, you still need to make sure your suppliers, products and purchases are kept in order, lest you end up losing money without even knowing why. StarCode is a specialized solution that can be used to manage a small business, retail store or big outlet in an efficient manner and with latest technologies. StarCode is available in three different variants to meet the requirements of every customer. All three variant can operate in Express or Network modes.

StarCode is a Point of Sale system integrated with Inventory Management. It updates the inventory in real time, and allows managing "virtually" unlimited items.

In Express mode it does not require any additional database server. Everything is bundled with the installer. One click install, and immediately ready to use after installation

- **StarCode Lite:** Lite edition of StarCode is meant for basic users. It has all the basic inventory management and point of sales features. Ideal for home users or small shops.

- **StarCode Plus:** Plus edition has more advanced features such as multi-user login, roles based security, customers management, barcode generation, and invoice generations. Best for retailers and small businesses.

- **StarCode Pro:** Pro edition has all the features of Lite and Plus edition, and more advanced features such as purchase management, expense management, user time log reports and quick pay features. This is best suited for small or large retail outlets.

Network mode of operation require MySQL Server. MySQL is available free of cost. Install MySQL server on any machine, and provide connection parameters to the application. You can connect many terminals running StarCode to one MySQL server.

The system makes it easy for anyone to benefit from the functions of StarCode since it comes with a user-friendly graphic user interface, whereas its buttons and menus are kept as intuitive as possible. Even if you have little computer skills, you can easily create new categories and product entries, as well as add new vendors and inventories.
